

KILMARNOCK
JUNIOR ICE HOCKEY CLUB

TECHNICAL PACKAGE

INTRODUCTION

This technical package will outline how our teams will play this season. We will be teaching and refining our individual and team skills all season.

This technical plan is broken into three simple to understand components based on three zones of the ice; the Defensive Zone, the Neutral Zone and the Offensive Zone. Within each of the three zones you will be taught what we want you to do as a team when;

A. We have the puck?

B. We don't have the puck?

Our hockey style of play will be known for the following four principles:

1. Pressure high tempo offensive and defensive team
2. Persistent work ethic in all areas of the ice
3. Short high intensity shifts
4. Disciplined team game

CONTENTS

DEFENSIVE ZONE

Offence Breakouts

Defense DZ Coverage and the Offensive Zone.
Within each of the three zones you will be taught what we want you to do as a team when;

NEUTRAL ZONE

Offense Regroups

Defense 1 man forecheck

OFFENSIVE ZONE

Offense 4 man pressure attack

Defense 2-1-2, 1-2-2 forecheck

SPECIAL TEAMS

Penalty Kill 4 v 5 / 3 v 5

Power Play 5 v 4 / 5 v 3

SPECIAL SITUATIONS

Protecting the lead 1-2-2

Come from behind Press

FACE-OFFS

Neutral Zone

Offensive Zone

Power Play

Penalty Kill

DEFENSIVE TEAM PLAY OVERVIEW

Principles of Defensive Team Play

1. Pressure
2. Positioning
3. Stall/Contain
4. Support
5. Transition

Pursuit - involves immediate and correct angling to limit opponent's options

Concentration - grouping of defensive players to restrict space

Commit - determines whether the defensive player commits or contain the offensive player with the puck

The concept of protecting the middle of the ice as a unit - deflecting the attack to the outside - and maintaining defensive side is the foundation to defensive success.

First protect the middle of the ice and then pressure out from there.

To do this it is important to identify a home base - **THE HOUSE**

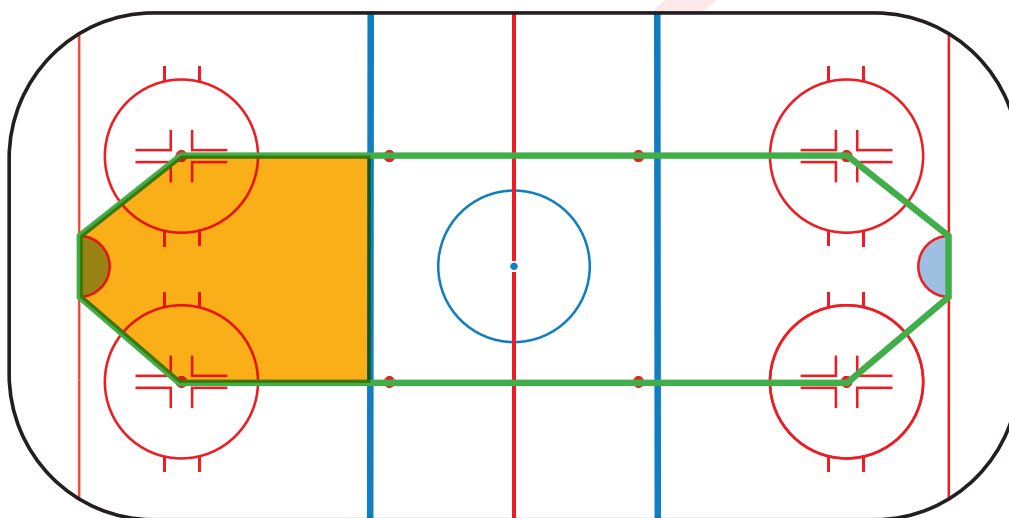

- as the most critical ice to protect. Strong net front coverage is essential.

Patience is an important virtue when defending against the attack.

This area is out of bounds for opposing players - **KEEP THE HOUSE CLEAN**

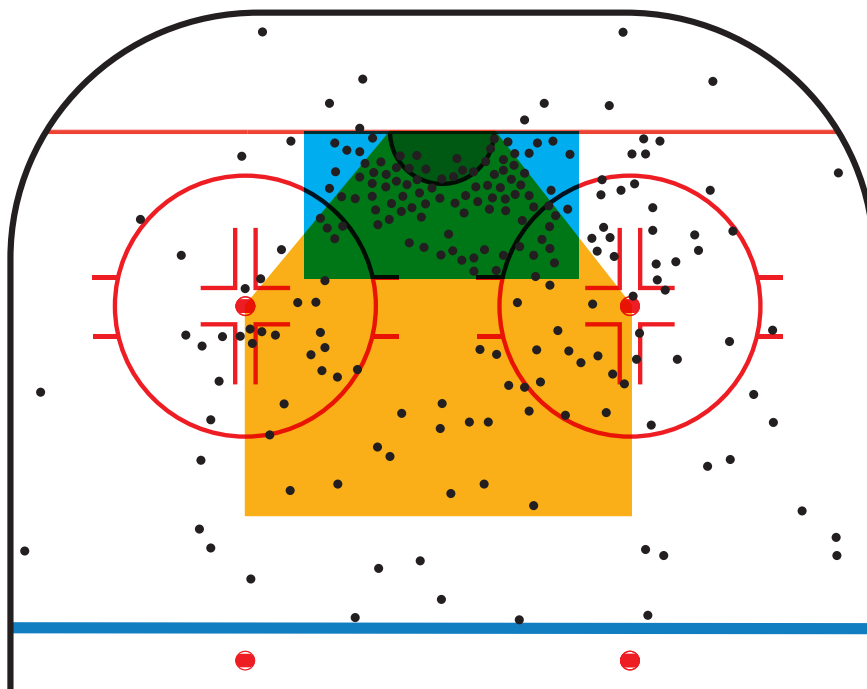

- let's make sure we check the opponents in this area.

Protecting the middle is essential, but it is important to also use the principle of pressure to take away time and space and to force the opposition into making poor decisions.

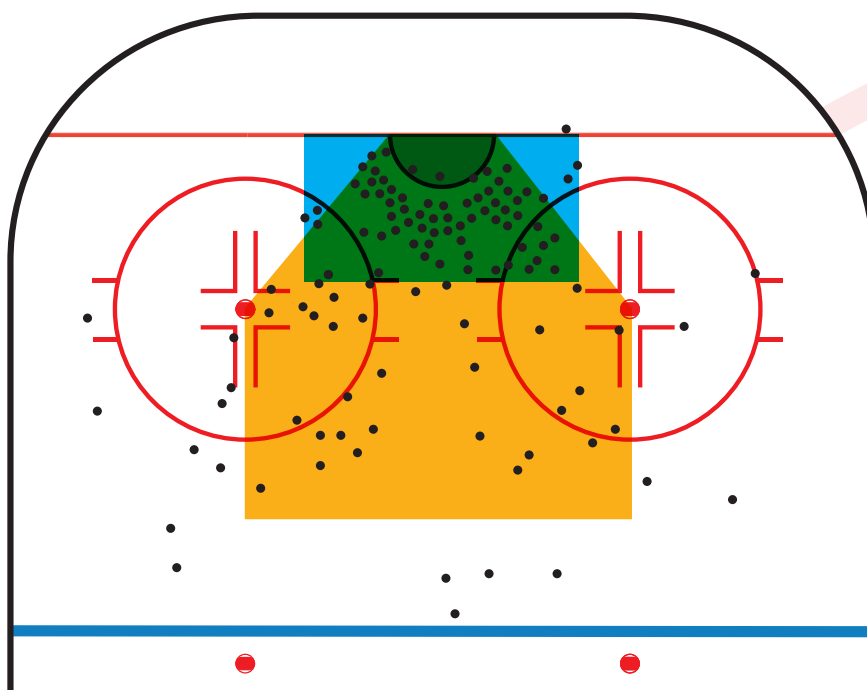

PROTECT OUR HOUSE!

Goals scored from NHL Games

Playoffs goals from round 1

Playoffs goals from round 2

DEFENSIVE ZONE

Defensive Team Play is a work and commitment to defense issue.

Defensive Team Play is less about your talent more about the right attitude, hard work and a commitment to defense.

The team has to understand, much like an OZ fore-checks we must deploy a system that provides us the best chance to recover the puck and counter attack.

Definition of a loose puck, we apply pressure when;

- Is not clearly set up
- Is receiving a pass
- Has his back turned
- Has poor possession
- Has no support
- Puck in feet

DEFENSIVE ZONE

Principles of Defensive Zone

1. Pressure
2. Positioning
3. Stall/Contain
4. Support
5. Transition

These are implemented through the use of;

Speed – quickness to defend – limit offensive options – force errors

Pursuit – involves immediate and correct angling to limit opponent's options

Concentration – grouping of defensive players to restrict space

Commit – determines whether the defensive player commits or contain the offensive player with the puck

Using the above principles we will accomplish the following;

1. Protect the house
2. Always be on the defensive side of the puck
3. Outnumber the opposition at the puck in our end
4. Your body in front of the puck
5. Sticks in passing lanes
6. Understand your role in the defensive zone

DEFENSIVE ZONE PLAY

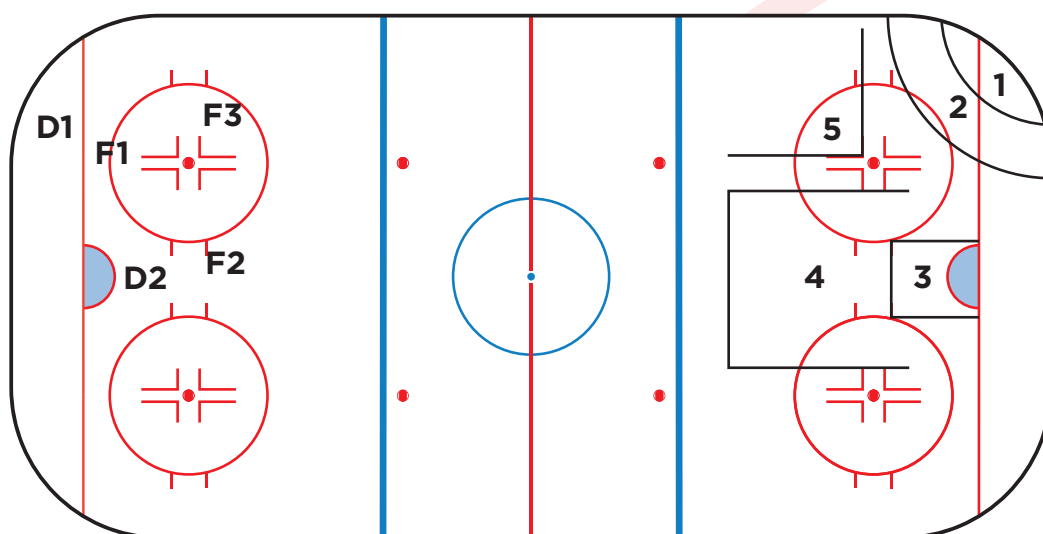

Man on Box Behind Zones of Coverage

This is the shape of the defensive unit when the puck is in a corner

1. Contact Zone - D1 plays Man-on-man (pressure/contain) on the puck carrier
2. Support Zone - 1st forward back supports D1 (often C)
3. Net Zone - D2 plays net zone
4. Slot Zone - 2nd F back (F2) plays slot zone (often LW)
5. Point Zone - 3rd F back (F3) plays Point Zone (often RW)

Key Points

- Face puck
- Swivel head
- Stop & start
- Straight line skate.
- Active-stick on ice

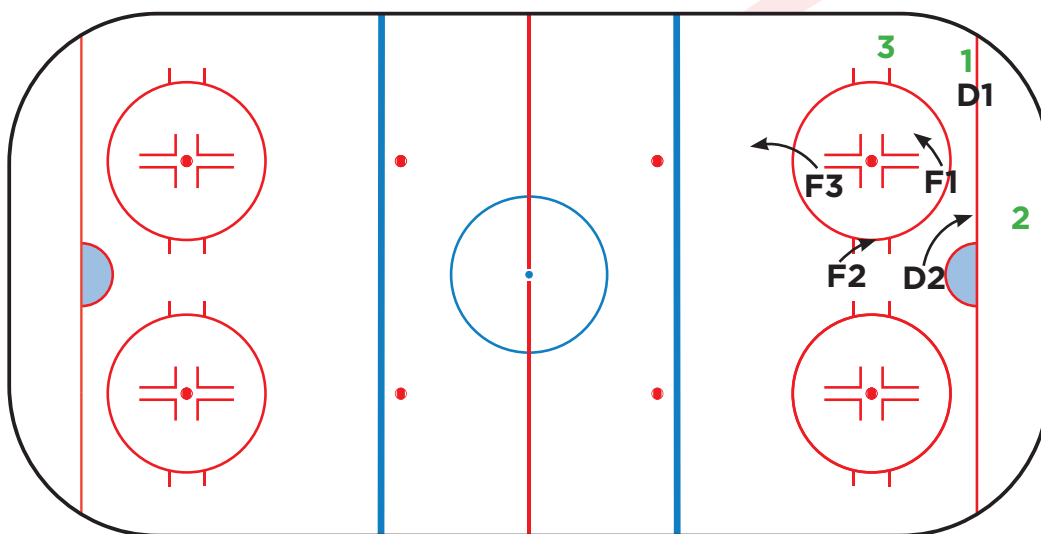

DEFENSIVE ZONE PLAY

Man on Box Behind - Man on Man Aware

This is the shape of the defensive unit when the puck is in a corner

- D1 actively pressures and contains opponent (O1)
- F1 (often C) is aware of opponent (O3) and will shade 1/2 way
- D2 aware of opponent (O2) plays near post – or closed
- F2 (often LW) covers the slot / net zone
- F3 (often the RW) shades the puck side point
- In some situations it will become a man on man (stick on man) with 2 or 3 players
- How close one plays to players in their zone of cover depends on the situation – they will figure it out!

All Players are aware of players in their zone of coverage

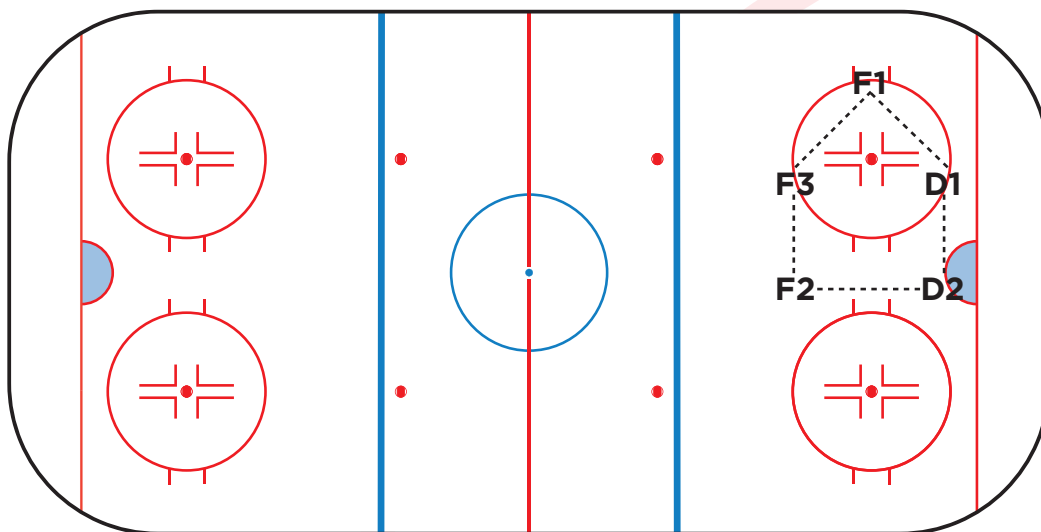

DEFENSIVE ZONE PLAY

House at the Hash Marks

This is the shape of the defensive unit when the puck is at the outside circle hash mark

- When the puck is at the hash the defensive shape looks like the roof of a house and the slot zone and net zone defenders F2 and D2 play inside the roof of the house
- All passing lanes are covered
- F3 and D1 form the wedge of the roof with F1 pressuring the puck at the hash

Note: D1 may pressure at the hash marks instead of F1 in some game situations such as defending a 1/1 from the Neutral Zone - in leading to this formation or the puck is brought out of the def. corner up the boards by an opposing player.

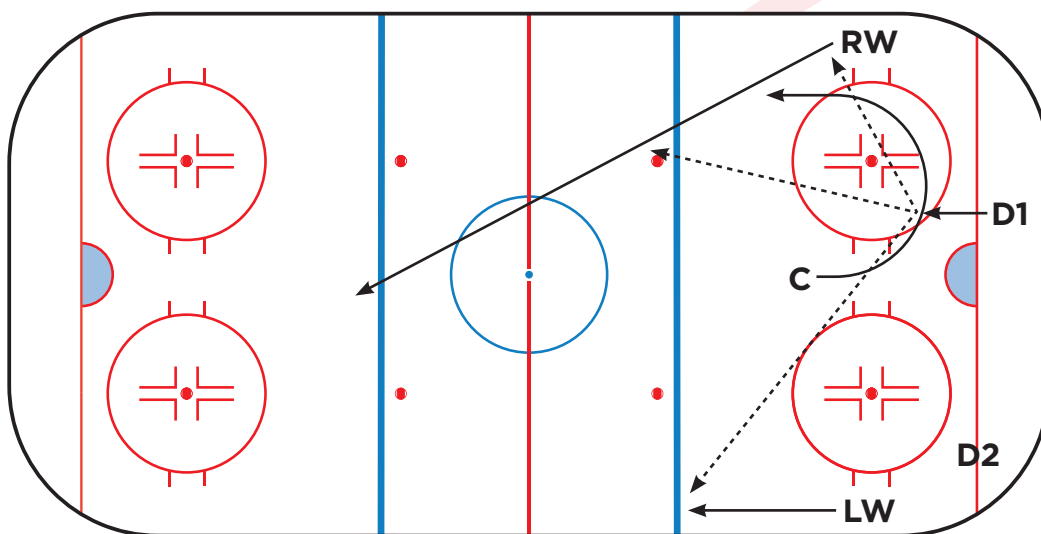

BREAKOUTS

Controlled Breakout

The objective is to come out of our zone against minimal or no pressure with team speed

- D1 sets up behind the net and watches the C break to the side boards. D2 supports D1 in corner as a passing option if needed.
- C moves to side boards (can be either side) and turns up boards with speed
- RW skates at 45° angle to the middle of the far blue line with speed stretching out the other team's defensemen while also being a passing option
- D1 steps out quickly behind net with puck once C has moved to side boards and looks to pass to either forward breaking with speed

Note: If D1 has no pass to any forward then skate with puck or pass to D2.

BREAKOUTS

Pressure Breakout

The objective is team control of the puck coming out of our zone. The defenseman with the puck must make the first pass quickly to his teammates.

- D1 (closest D to loose puck) retrieves puck (but first doing a shoulder check to see pressure coming) and does one of three options with the puck

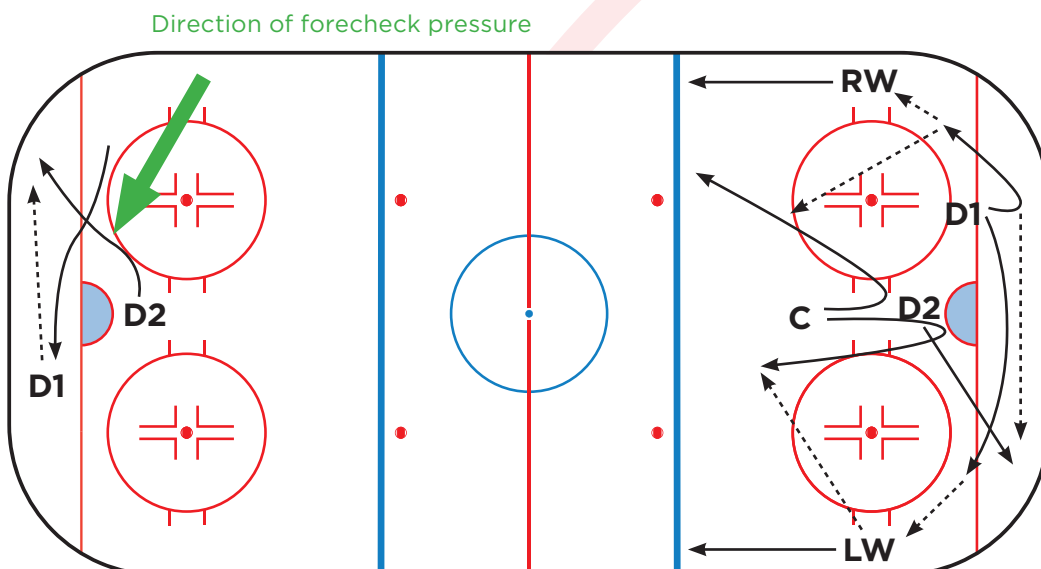

3 "D to D Pass"

Note: After the pass you must move up ice quickly and support the puck carrier and/or establish a tight gap on the opposing players should a turn over occur.

- D2 starts off directly in front of the net protecting the net in case of a turn over by D1. If D1 has full control D2 then leaks off to the far corner to support D1 to becoming a passing outlet option. C reads which side of the zone the puck is moved to by D1 and turns to the puck side (strong side) skating up ice angled towards the boards
- LW and RW set up at the outside hash marks of the face-off circle and become a passing option for D1
- The weak side Winger (side farthest from the puck) skates out of the zone same as in the controlled break out shown above - up to the blueline along the boards then across the middle of the N-Zone.

Note: Key in execution under forecheck pressure is D1's quickness and accuracy of the first pass.

Note for D: A 4th puck movement option is a D to D "Reverse (shown above left). The key to this option is the timing between D1 and D2 to ensure deceptive and quick movement of the puck. This option, if done right, can escape on-coming pressure from forecheckers very effectively. D2 reads backside forecheck pressure on D1 and provides support behind net (off to their side) once forechecker passes by and D1 reverses puck off boards to D2. D2 then picks up puck and quickly moves puck up ice leaving the forecheck pressure now behind the play.

OFFENSIVE ZONE

Principles of Offensive Team Play

1. Pressure
2. Puck control
3. Support
4. Transition

These are implemented through the use of;

Speed – a quickness to attack that will limit the reaction time of the defender and force defensive error.

Concentration of Attack: – any action or movement in a confined area which creates an offensive numerical advantage.

Offensive Zone

Teach being creative with the puck through proper puck support. Support the triangle concept. Teach how moving your feet and the puck at the same time creates space and scoring chances. We want players to be creative.

Principles of Offensive Zone

1. Support the puck
2. Attack the house
3. Find open ice
4. Offensive zone entry
5. Set-up
6. Puck possession
7. We outnumber our opponents at the puck
8. Puck and player movement
9. Player traffic and presence
10. Third man high
11. Transition
12. Triangulation

FORECHECK 2-1-2

Pressuring on the forecheck forces the opposition into making poor (hurried) decisions. Puck pressure takes away time and space.

The “Thinking Principles” of Pressure and Contain are applied by F1 (first forechecker). They must read the degree of control to know when to pressure or contain. They must also “know how” to pressure (force - hawking, angle, stick check) and contain (steer, use stick). Support by the second (F2) and third (F3) forechecker requires them to position above the puck with width and depth to read the play and act appropriately.

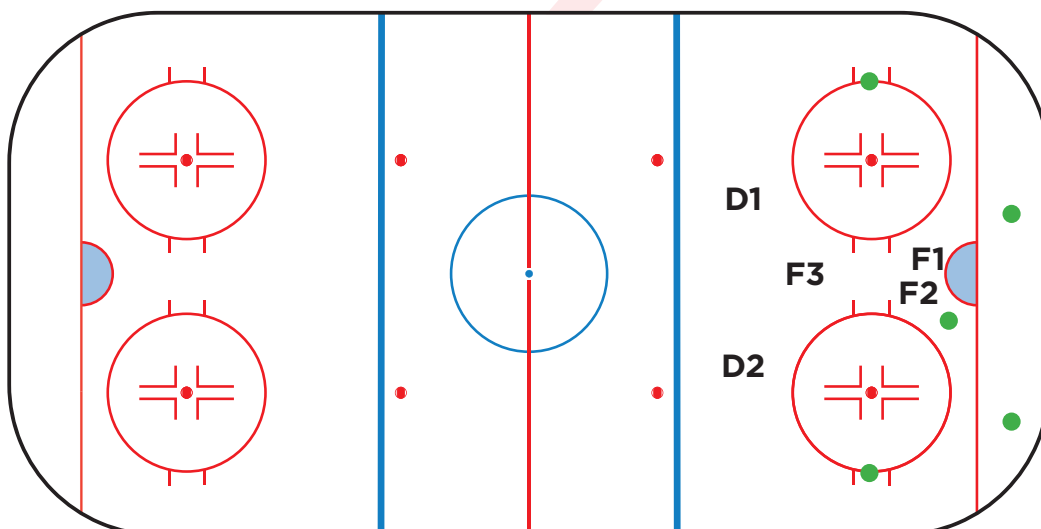

2-1-2 Aggressive Forecheck

The 2-1-2 Forecheck is a traditional way of applying pressure in the offensive zone when we do not have the puck. This forechecking tactic involves two aggressive forwards (F1 & F2) with the third forward (F3) positioned high reading and reacting to where the puck advances next. If executed properly, this system can lead to many turnovers by the opposing team.

Responsibilities

- **F1:** Skating inside - out using quick feet, angle player with puck to the side boards and maintain pursuit of puck carrier
- **F2:** Cut off puck carrier by taking body, separating puck from player or retrieve loose puck.
- **F3:** If D moves puck directly to winger on side boards, cover for strong side D who will pinch by backing him up at blue line. If offensive D reverses or passes D to D, you become F1 and pressure new puck carrier.
- **D1:** Read where puck is going, if being passed to your side winger, step up and pinch taking body. F3 will back you up. If puck is reversed or passed D to D, slide across blue-line to mid point.
- **D2:** If puck is being moved out along far wall, move to mid blue line. If puck is reversed or passed D to D, slide to side boards or pinch if passed to your side winger

SET UP

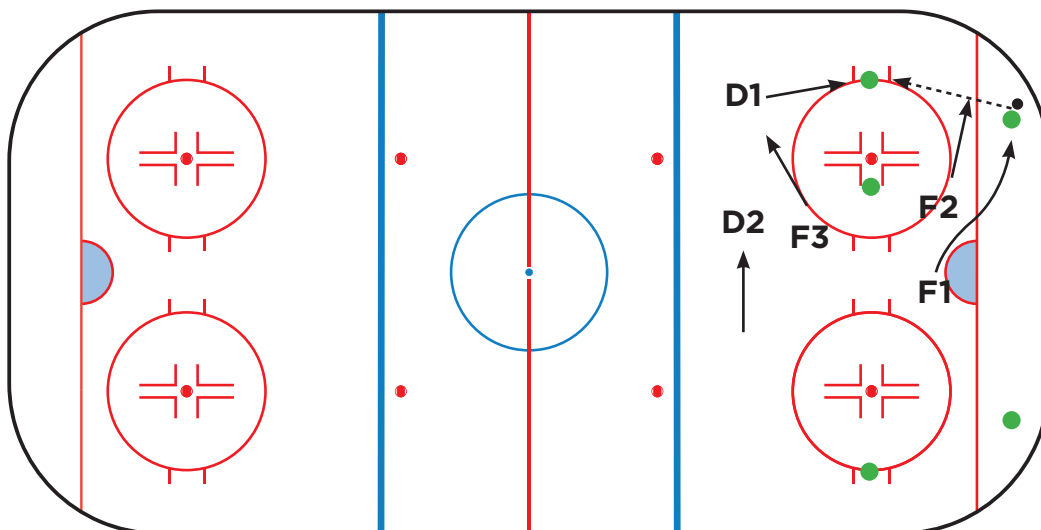

FORECHECK

2-1-2 Aggressive Forecheck

Responsibilities

- **F1:** If you can make the hit, take the body, if you cannot, search for loose puck
- **F2:** Take body of puck carrier or find loose puck
- **F3:** Support D1 from behind
- **D1:** Pinch if puck passed to winger by approaching along boards, take body of necessary or seal off any “dump outs”
- **D2:** Slide to mid-blueline

EXECUTION

Please see P15 for when the group movement if the puck is reversed or passed D to D

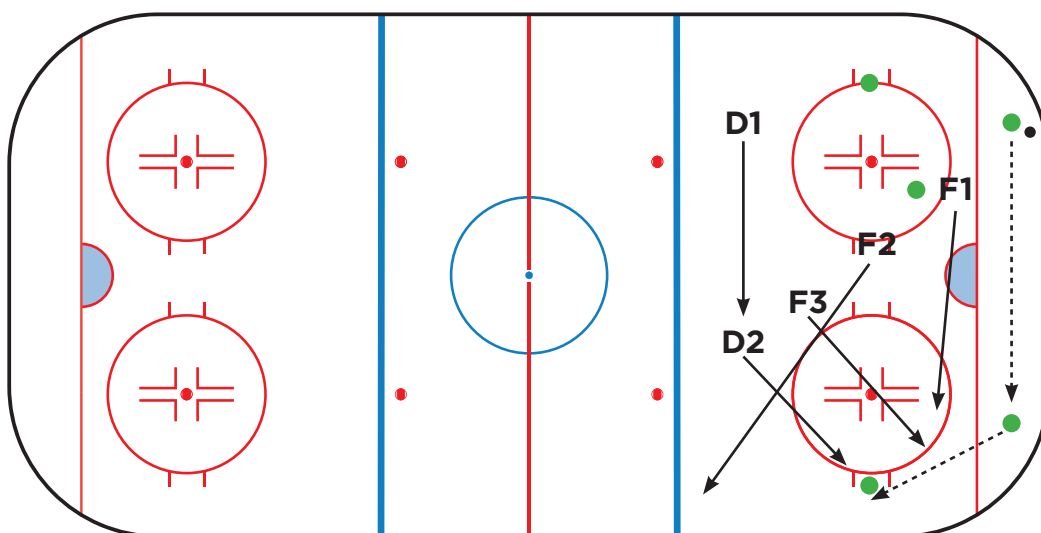

FORECHECK

2-1-2 Aggressive Forecheck

Responsibilities

- **F1:** Use quick feet and stay in pursuit of new puck carrier
- **F2:** Track quickly back through middle of ice and move to take F3 position in high slot or cover for D2 if he pinches
- **F3:** Quickly move into corner and attack new puck carrier angling him to the wide boards or taking body.
- **D1:** Slide across to mid-blueline.
- **D1:** Anticipate pass to winger on side boards or step up and play the body of player with the puck or seal boards to stop any dump-outs.

EXECUTION

FORECHECK 1-2-2

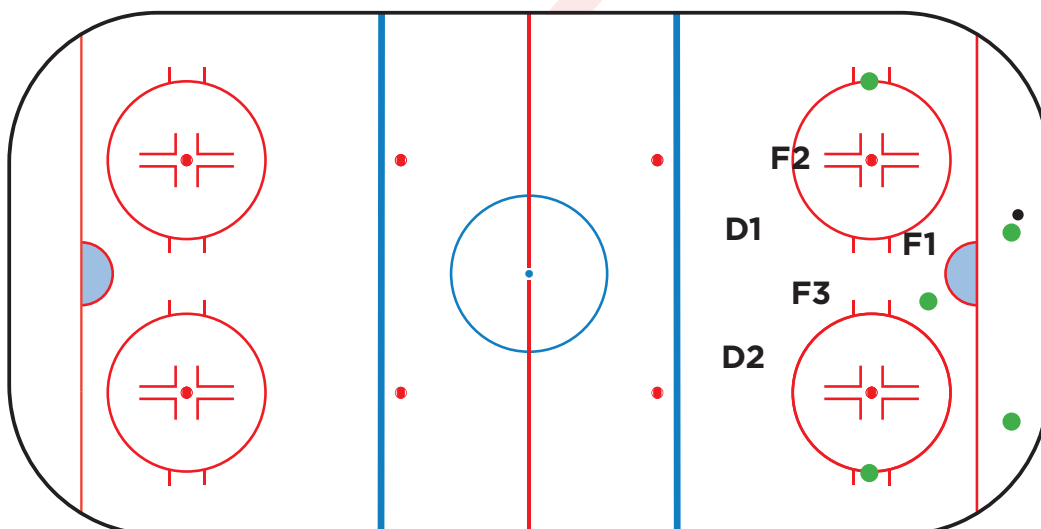

There are two types of 1-2-2 forechecking systems; 1-2-2 Aggressive and 1-2-2 Passive. 1-2-2 Aggressive is no different than the intent of a 2-1-2 forecheck in that the objective is through pressure create a turnover in the offensive zone. The difference in the 2-1-2 and 1-2-2 Aggressive forecheck is only the starting set up or formation in the offensive zone. The 1-2-2 Passive forecheck is used usually late in a game when protecting a lead. This system will be looked at later in the "Special Situations" section of this technical package.

1-2-2 Aggressive Forecheck - The Setup

Responsibilities

Note: The formation starts off as a 1-2-2 but moves into a 2-1-2.

- **F1:** Skating inside - out using quick feet, angle player with puck to the side boards and maintain pursuit of puck carrier
- **F2:** Anticipates where the puck is headed; if passes to near side winger then steps up and takes body, separating puck from player or retrieve loose puck, if D skates puck out then takes the body of the D with puck separating puck from body.
- **F3:** Reads the position of F1 and F2 and anticipates where the puck is going and slides across the top of the slot (ringette line). If the puck is turned over and in possession of F1 or F2, F3 becomes a passing option and finds open space to receive pass or goes to net for screen or rebound. If offensive D reverses or passes D to D, F3 becomes F1 and pressures new puck carrier.
- **D1:** Stays in position on blueline and holds blueline keeping pucks in if shot out or retreats to neutral zone if attackers successfully exit offensive zone. Does NOT pinch.
- **D2:** Same as D1 but slides across to mid-blueline if puck comes up far side boards. If puck is reversed or passed D to D, D2 slides to his side sealing off boards. Does NOT pinch.

FORECHECK

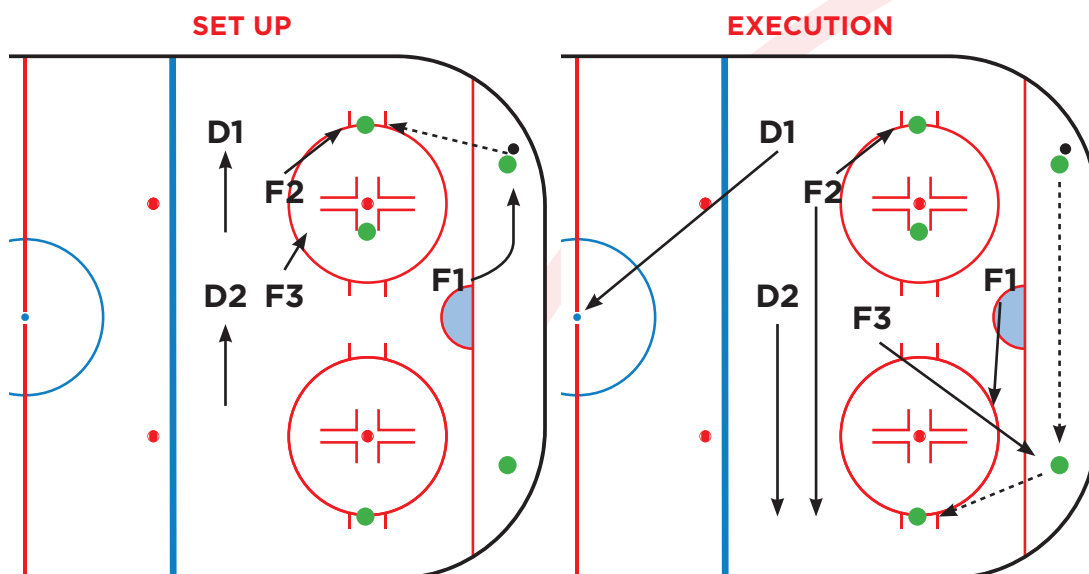

1-2-2 Aggressive Forecheck

Responsibilities

- **F1:** If you can make the hit, take the body, if you cannot, search for loose puck
- **F2:** Take body of near side winger or find loose puck
- **F3:** Support F2 and F1 by retrieving loose puck or move to open space or net if F1 or F2 retains puck control.
- **D1:** Slide across to side boards and seal off any “dump outs”. If puck is successfully coming out of zone, retrieve to neutral zone. NO pinching.
- **D2:** Slide to mid-blueline to support forwards.

Responsibilities

- **F1:** Use quick feet and stay in pursuit of new puck carrier
- **F2:** Track quickly across top of slot (ringette line) and move to support F3 up high and take away any cross ice passes.
- **F3:** Becomes F1 now and quickly moves into corner and attacks new puck carrier angling him to the wide boards or taking body.
- **D1:** Supports D2 by retreating to centre ice. If puck is turned over then D1 holds blue line.
- **D1:** Slides over to side boards and seals off any dump-outs. If opponents successfully exit zone with puck, retreat to neutral zone.

OFFENSIVE ZONE ATTACK

Double Middle Drive

This offense attack tactic creates pressure at the net zone with two attacking forwards without the puck and activates a defenseman offensively.

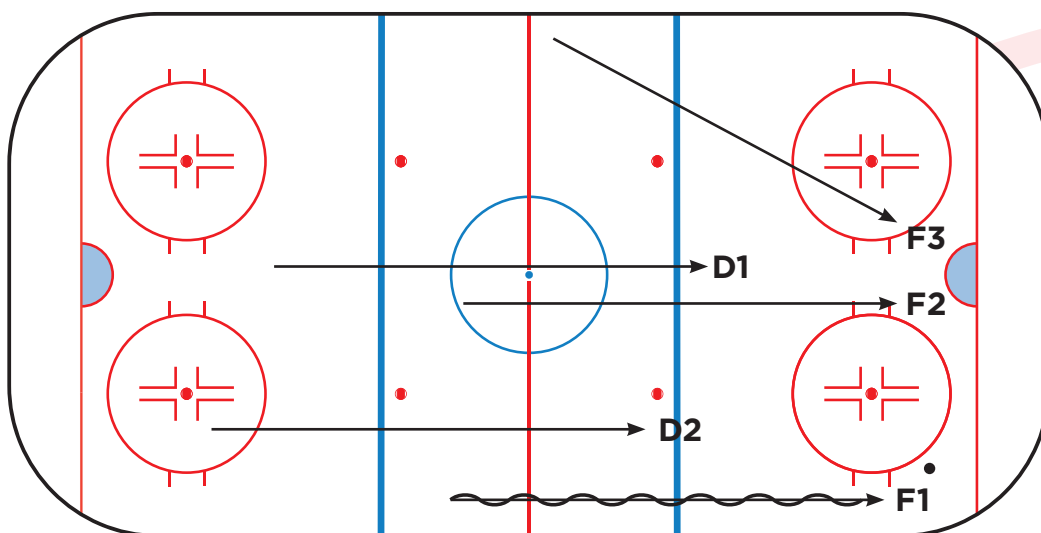

Responsibilities

- **F1:** Attack blueline with speed; drive wide with puck if D man is closer to the middle of the ice or cut inside and across if the D man is closer to the boards
- **F2:** Drive the mid-lane with stick on the ice and stop at the net
- **F3:** Same as F2
- **D1:** Jump up and enter the high slot as a second wave of attack
- **D2:** Mirror the puck on the blue line - no further

Note: If puck gets to the net zone from any player, F1, F2, F3 and D1 go to the net with D1 the highest positioned player. If puck does not go to next zone D1 retreat back to blue-line. Basically D1 moves in and out if the puck is at the net zone or not.

Offensive Zone Rule:

All pucks from the top of the circle or lower are shot on net unless you are in an odd man advantage situation! Therefore F2, F3 and D1 go to net for a rebound (D1 maximum in high slot)!

NEUTRAL ZONE

The team has to understand, much like an OZ fore-checks we must deploy a defensive system that provides us the best chance to recover the puck and counter attack.

Principles of Neutral Zone

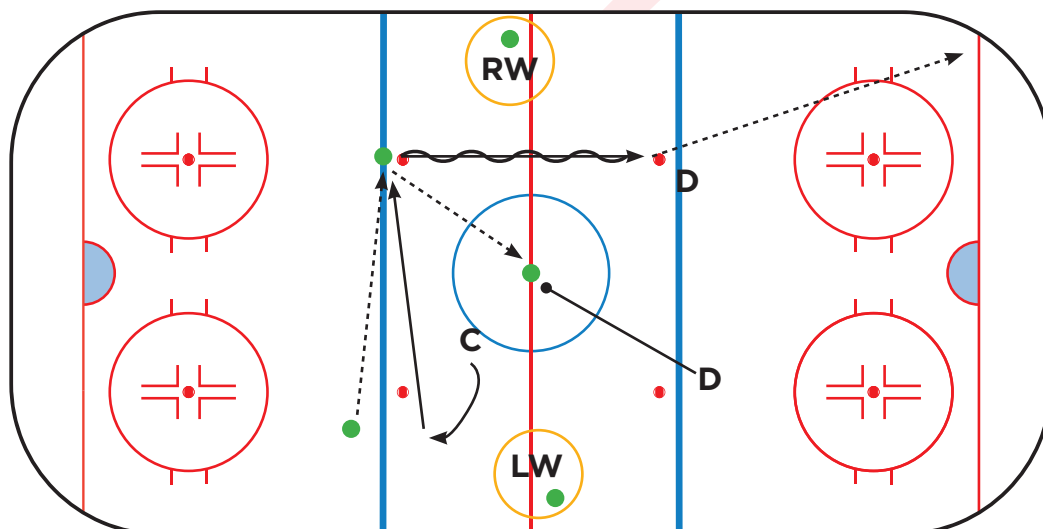

1. Pressure
2. Positioning
3. Take away time and space
4. Take away the middle of the ice
5. Force a dump
6. Pick up a man and force him to the outside

1-2-2 Forecheck

The focus of the 1-2-2 N-zone forecheck is to take away passes to forwards and force the offensive defenseman to RW turn the puck over.

Responsibilities

- **C:** forecheck outside-in forcing D with puck to pass to his D partner, then take away the pass back by skating between both D
- **LW & RW:** cover offensive wingers closing keeping body between winger and offensive man with the puck – keep your head on a swivel
- **D:** if puck is passed to the only open man in centre of ice the weak side D step up and take the body of centreman. If D with puck dumps the puck in D retreat and start the defensive zone breakout.

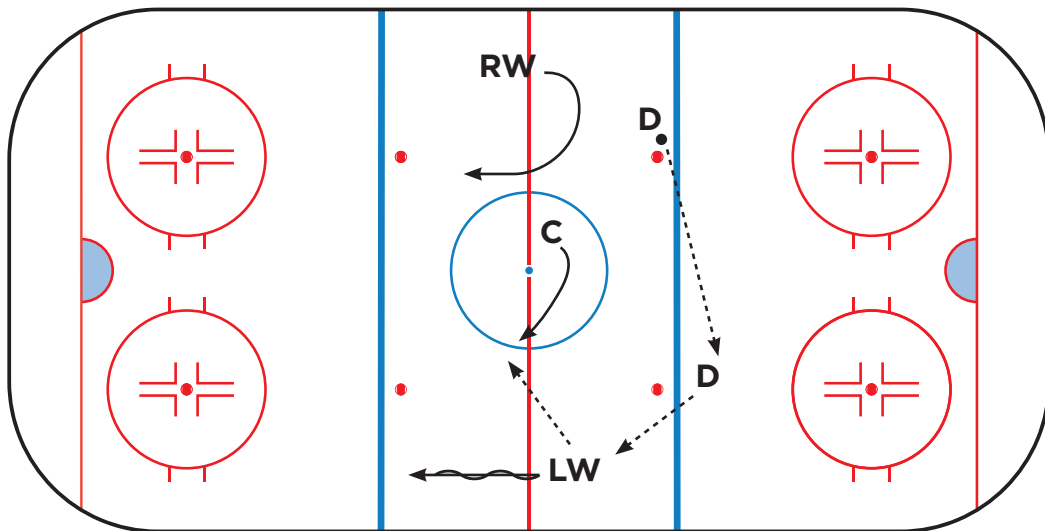

REGROUPS

Offensive Re-Groups

The focus is for the strong side winger to provide stationary anchor support down low on the boards in the N-zone and for D men to move the puck away from forechecking pressure.

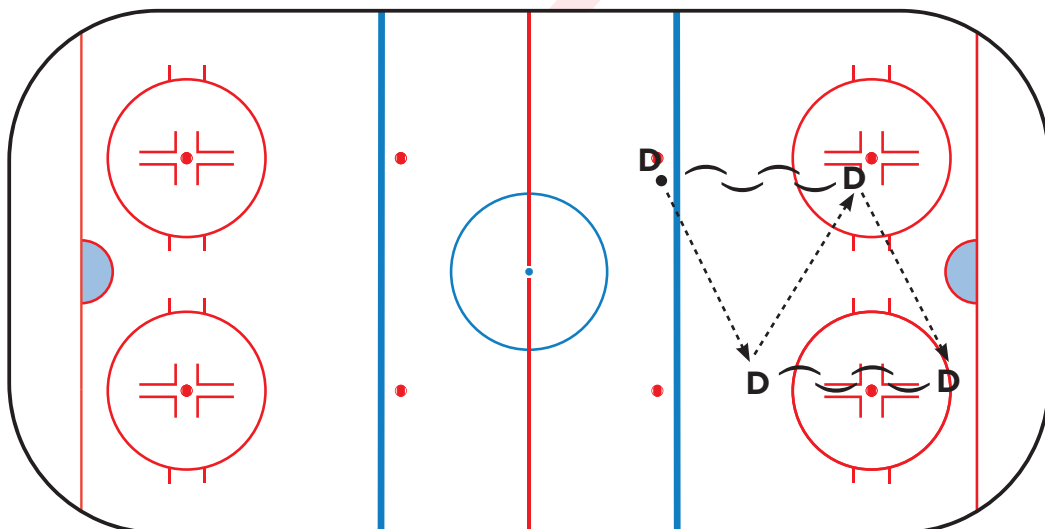

Key is always on the strong side of the puck we need a winger set up facing with stick square to the d-man with the puck providing a short pass outlet.

Hinge Passing

“Hinge Passing” is a simple Defensemen tactic to effectively move the puck away from forechecking pressure.

Key is that D2 must support D1 on an angle (the hinge) to provide an open passing lane and avoid being covered. A second key point is once D1 makes the pass to their supporting D2 partner, D1 must quickly also support D2 now with their own “hinge” pass option.

PENALTY KILL

Every player should be able to earn ice time killing penalties. The PK is about hard work, effort and a great attitude. Playing the game while a man down is a work and commitment to defense issue. Every player that has the right attitude can be on the PK. There is no substitute for hard work.

Definition of a loose puck; we apply pressure when the opponent...

- Is not clearly set up
- Is receiving a pass
- Has his back turned
- Has poor possession
- Has no support
- Puck in feet

Principles of Penalty Kill:

1. Pressure
2. Stall/Contain
3. Support
4. Transition
5. Positioning

These are implemented through the use of;

- a. Speed – quickness to defend – limit offensive options– force errors
- b. Pursuit – involves immediate and correct angling to limit opponent's options
- c. Concentration – grouping of defensive players to restrict space
- d. Commit – determines whether the defensive player commits or contain the offensive player with the puck

Using the above principles we will accomplish the following;

- a. 1 pass never beats two players
- b. Force the opposition to pass the puck
- c. Force a dump
- d. Prevent set up
- e. Protect the house
- f. Your body in front of the puck
- g. Active stick in the passing lanes
- h. Take away time and space
- i. Take away the middle of the ice

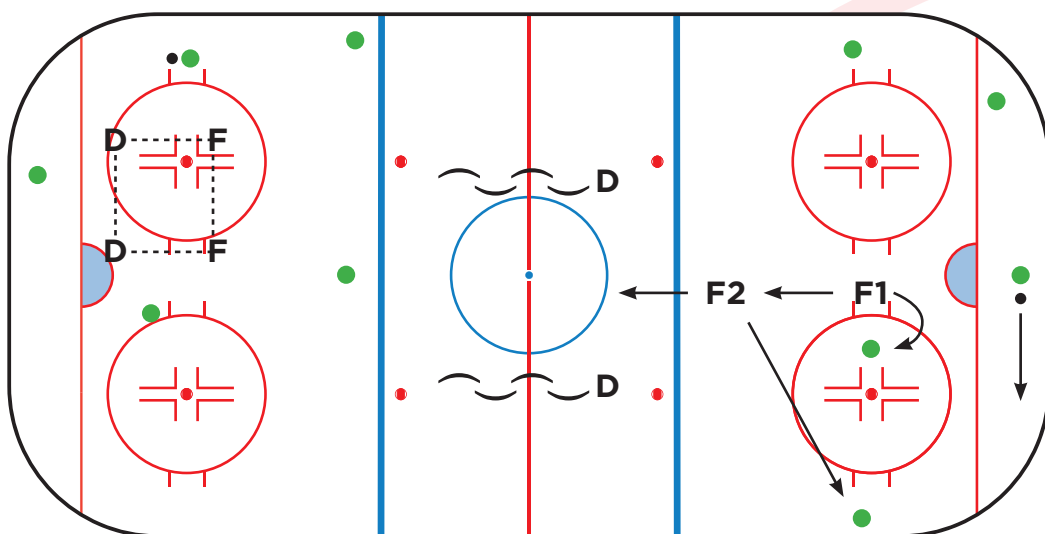

PENALTY KILLING

4 vs 5

The focus on penalty killing 4 vs. 5 is to pressure the puck in the offensive and neutral zone by a split “I” formation forecheck. In the defensive zone we want to maintain a disciplined “box” formation and move as a box within the zone as the puck moves around with the goal of keeping the puck and any shots ALWAYS from the outside. Penalty Killing involves high intensity SHORT shifts with the puck shot down the ice (unless on a odd-man offensive rush)

Key Principles

- **F1** steers puck carrier to side boards. If F1 cannot maintain pursuit then back off and straight line skate back up the middle of the ice
- **F2** “reads” what F1 does. If F1 stays in pursuit of the puck, F2 protects middle of the ice taking away any cross ice passes. If F1 cannot pursue puck and retreats up middle of ice, F2 then jumps up and takes over the puck pursuit.
- **D1 and D2** retreat unless they have a 110% chance of stepping up and creating a turnover.
- Same forecheck applies in the neutral zone
- Always have stick on ice to block passing lanes
- Use stops and starts with straight line skating – always face the puck, no big turns.

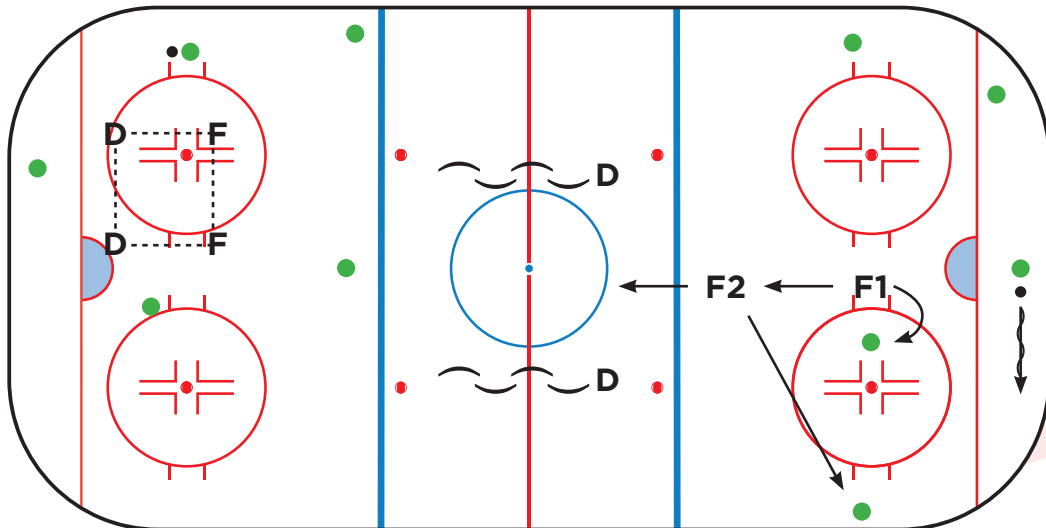

PENALTY KILLING

4 vs 5 Defensive Zone Play

Key Principles

- Active sticks in box – protect the middle of the box by taking away passing lanes – use your stick to steer where the puck could go
- Maintain the box formation always when the other team has full control of the puck
- Pressure the puck always when the other team does not have full control of the puck
- Defensemen never get caught being tied up with an opponent when the puck is outside the box

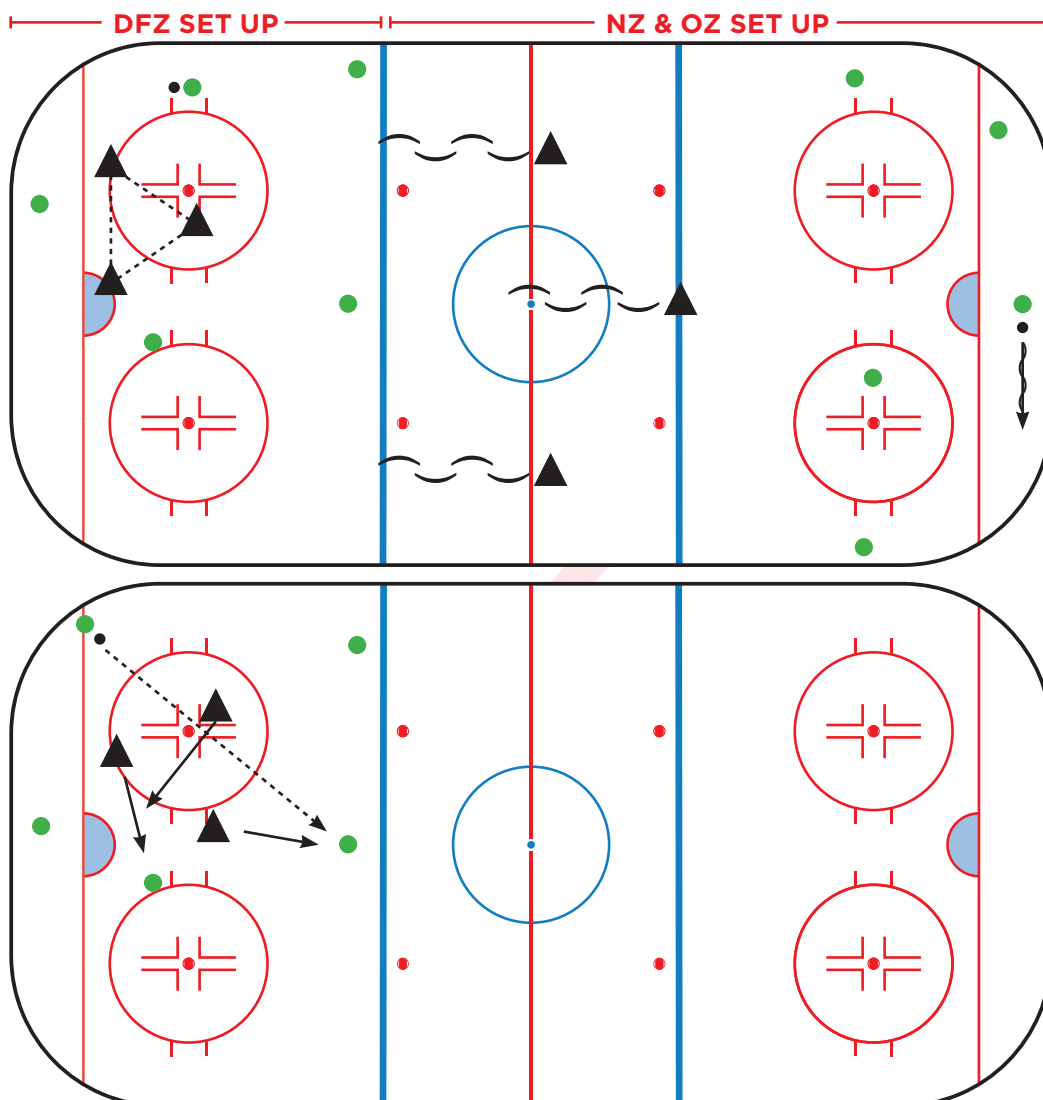

PENALTY KILLING

3 vs 5

The focus on penalty killing 3 vs. 5 is to cover as much ice as possible with only three players using a disciplined “triangle” formation in all areas of the ice. Stalling and forcing the puck to the outside are keys.

Key Principles

- Maintain your triangle formation in the neutral zone.
Do not chase the puck unless you are 110% certain you can get it.
- In the DFZ rotate the triangle as the puck is moved down low and up high (see illustration #2)
- Use active stick on ice and steer puck away from middle of the triangle
– take away passing lanes through the triangle
- Block all shooting lanes by placing body in direct line between the shooter and the net
- Use stops and starts with straight line skating

POWER PLAY

The power play is an opportunity to score and every player on the PP must take the opportunity seriously, it is a privilege to play the PP especially in critical game minutes.

Playing on the PP is an honour and if you don't exhibit the effort to win every race for a loose puck or loose puck battles your time on the PP should be limited in critical game minutes!

Each player is responsible for knowing the zone setups and options and must be able to execute at game speed.

Principles of Power Play:

- a. Support the puck
- b. Puck possession is critical
- c. Attack the middle of the ice
- d. Enter the offensive zone with speed and purpose
- e. Set-up
- f. Your puck and player movement must be done with speed and have a purpose
- g. Shoot (hit the net)
- h. Attack the house
- i. Triangulation
- j. We out number our opponents to get the puck back

POWER PLAY

5 on 4

The focus on power play is puck control as a five man unit in all three zones and set up of an open man for a quality shot on goal.

Breakout and Neutral Zone

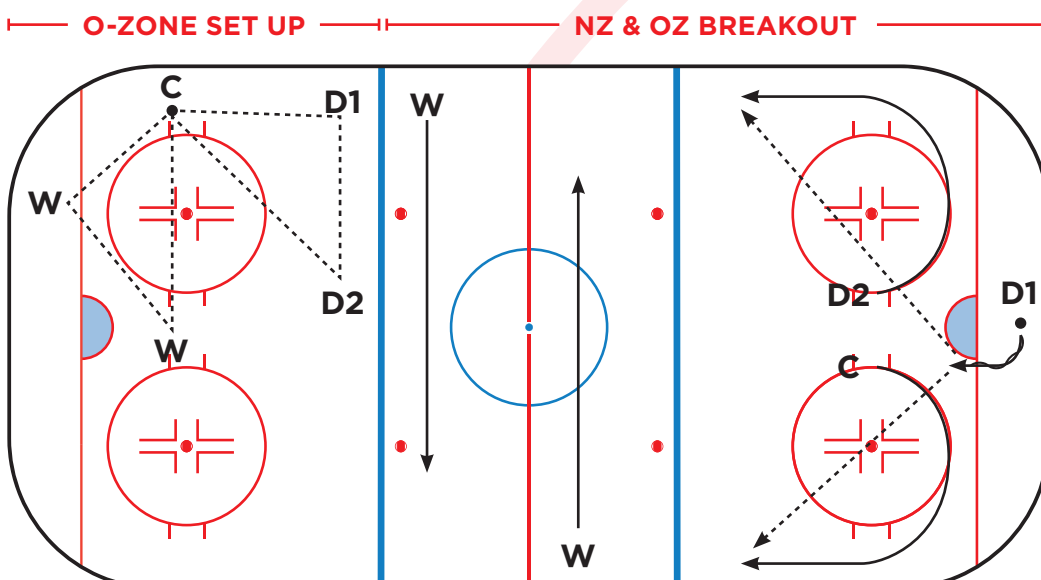

- **D1** (first D back) stop and set up behind net and allow time for C and D2 to curl to outside around circles. If under pressure you will have to move puck away from forecheck pressure quickly but use the net for protection.
- **C and D2** curl to far boards coming out with speed. D1 skates the puck out or passes to either D1 or C depending on forechecking pressure.
- **Both W's** take position as shown across from each other on far blueline and centerline. Skate across ice as a diversion or passing option once D1 steps out from behind the net and heads up ice with puck. Keep your stick on the ice and eye on the puck.

Offensive Zone:

- Set up with the C with the puck on the side boards as shown. In this formation you have two triangles in which to move the puck.
- A variety of scoring options come from this set up and will be worked on in practices.

Key Principles

- Always have a minimum of two players on all loose pucks
- When puck goes to the net zone a minimum of four players go to the net at all times for rebounds (3 forwards and weak side defenseman).
- Have patience, set up and find the open player through passing seams

POWER PLAY

5 on 3

The focus on power play is move the puck up ice quickly, skating it in and setting up into a “Box” + 1 formation.

Breakout and Neutral Zone

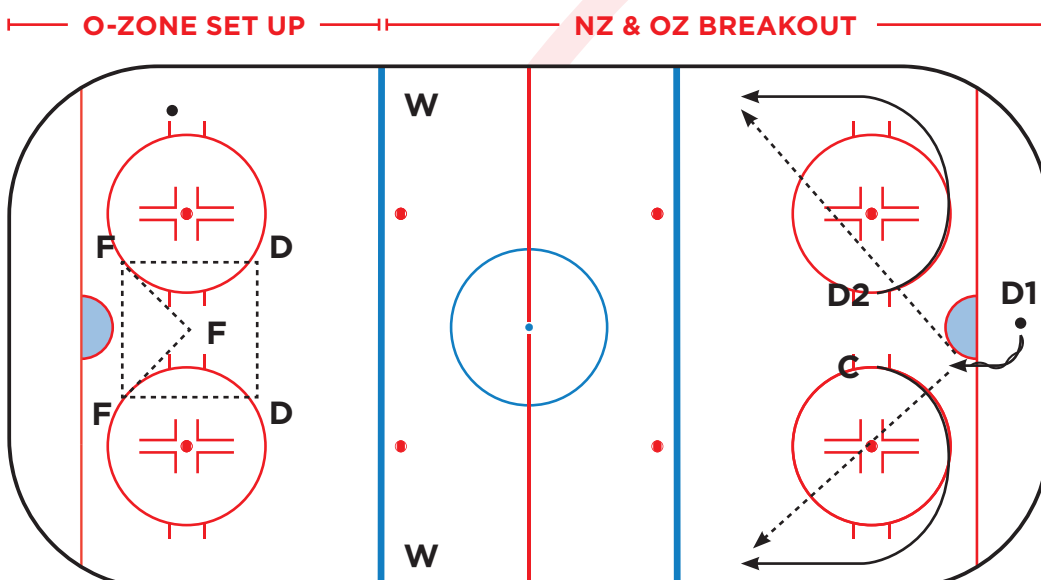

- **D1** (first D back) stop and set up behind net and allow time for C and D2 to curl to outside around circles. If under pressure you will have to move puck away from forecheck pressure quickly but use the net for protection.
- **C and D2** curl to far boards coming out with speed. D1 skates the puck out or passes to either D1 or C depending on forechecking pressure.
- **Both W's** take position stationary at far blueline side boards and stretch back opposing defensemen. Also serve as a passing outlet up ice if open.

Offensive Zone:

- Set up in a stationary box with one forward in the middle of the box moving high or low within the box
- The focus is let the puck do the work and move around or through the box to find an open man. **There is no need to skate around with the puck!**

Key Principles

- Always have a minimum of three players on all loose pucks.
- When puck goes to the net zone a minimum of four players go to the net at all times for rebounds (three forwards and weak side defenseman).
- Have patience, set up and find the open player through passing seams.

LATE IN THE GAME SPECIAL SITUATIONS

Protecting The Lead

Three simple rules to protect our lead with 5 minutes or less:

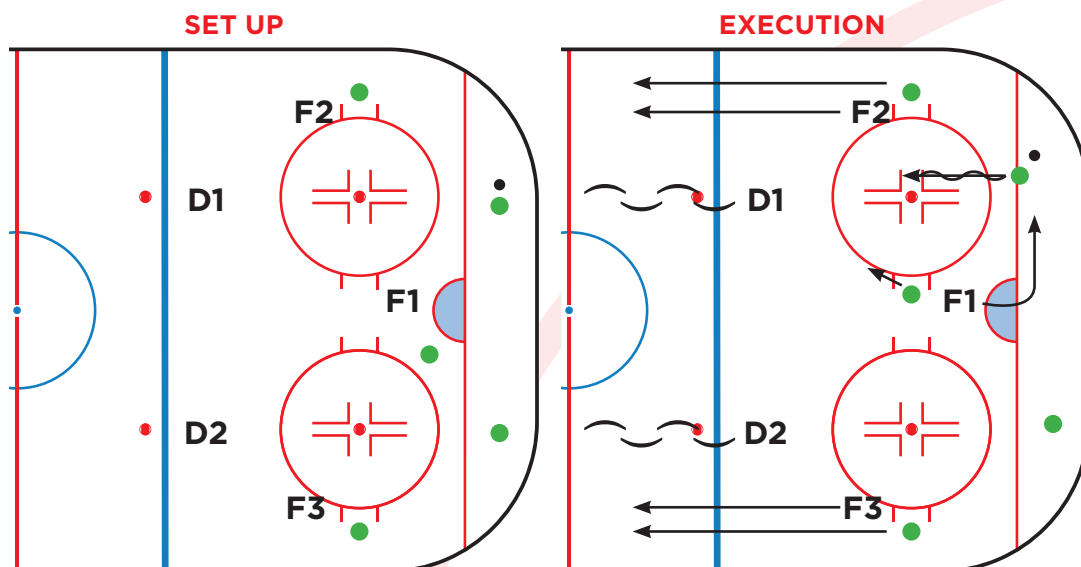

- i. Pucks get dumped soft dump ins (pucks placed to corners to remain behind goal line) from N. Zone and all 5 players stay above the puck forechecking 1-2-2 passive (unless odd man advantage situation).
- ii. No cross ice passes in any zone – everything goes up ice (unless attacking with an odd man advantage situation)
- iii. In the defensive zone all pucks get cleared immediately with the puck always going up ice (no breakout passes).
- iv. 30-45 second short shift rule is critical here – work hard and get off when puck is deep. The other team is desperate and will be tired.

1-2-2 Passive Forecheck

Responsibilities

Note: The objective is for F1 to put pressure on the puck carrier but all 5 players remain above the puck.

- **F1:** Skating inside - out using quick feet, angle player with puck to the side boards and maintain pursuit of puck carrier
- **F2 and F3:** Stay on your respective wingers taking away any passing options. Force defenseman with puck to have to skate it out.
- **D1 and D2:** Retreat to neutral zone or hold blueline if puck is turned over.

LATE IN THE GAME SPECIAL SITUATIONS

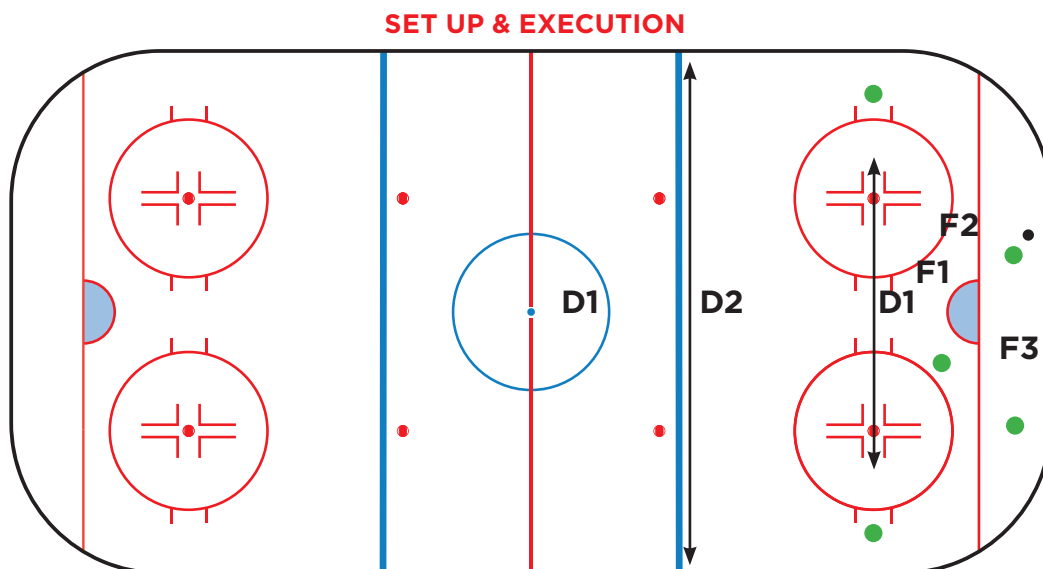

Coming From Behind

When we are behind in a game or a need a momentum change the call for the “PRESS” may come from the Head Coach.

The press is a 4-1 forechecking system formed off of us dumping the puck in from the Neutral zone hard and swarming the puck carrier and then the net once we regain possession from a turnover.

4-1 Pressure Forecheck

- **F1, F2, F3** pursue the puck and F1 taking body
- **D1** mirrors puck along line that cuts across the face-off dots
- **D2** mirrors puck from offensive blue line (stay on the blueline)
- All pucks go the next with F1, F2, F3 and D1 going to the net

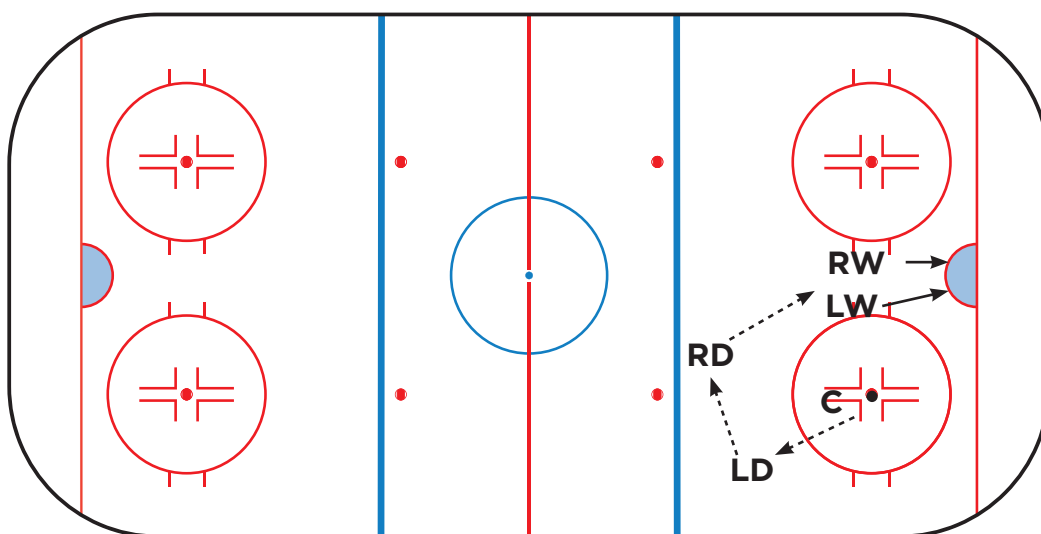

FACE-OFFS

Predator

- Centre wins draw back to LD
- Wings crash the net
- LD passes to RD for quick shot into traffic

Note: if the face-off is in the opposite circle then change the LD & RD

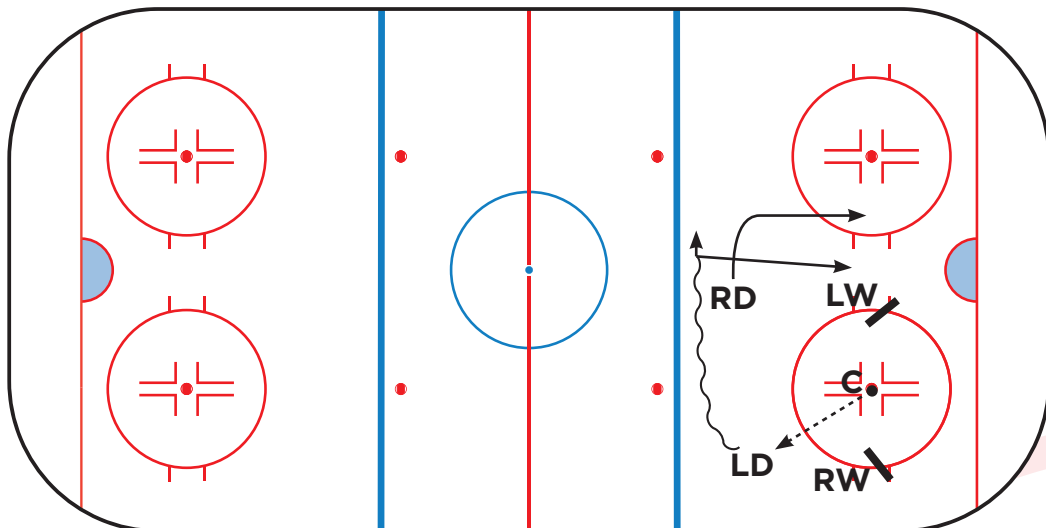

FACE-OFFS

Plymouth

- Centre wins draw back to LD
- LW & RW hold their ground and screen defenders
- RD loops wide and heads to outside post
- LD takes the puck and skates the blue line
- LD has option to shoot or pass to RD

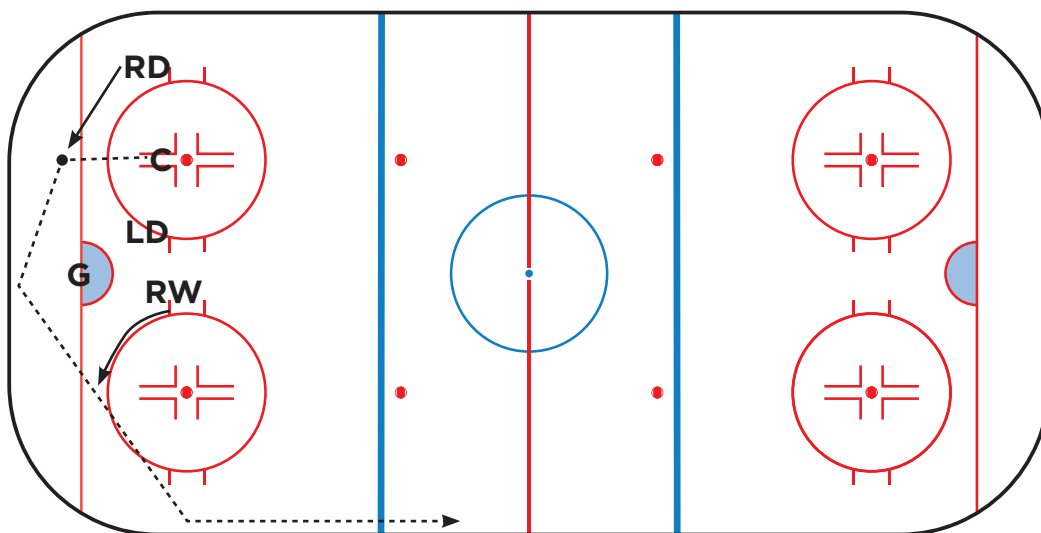

Note: Be aware of the new interference rules on face-offs. If the wings just hold their ground they can block a defender because they might have the right to occupy that space. If the move to block the defender you may get called.

FACE-OFFS

Penalty Kill Release

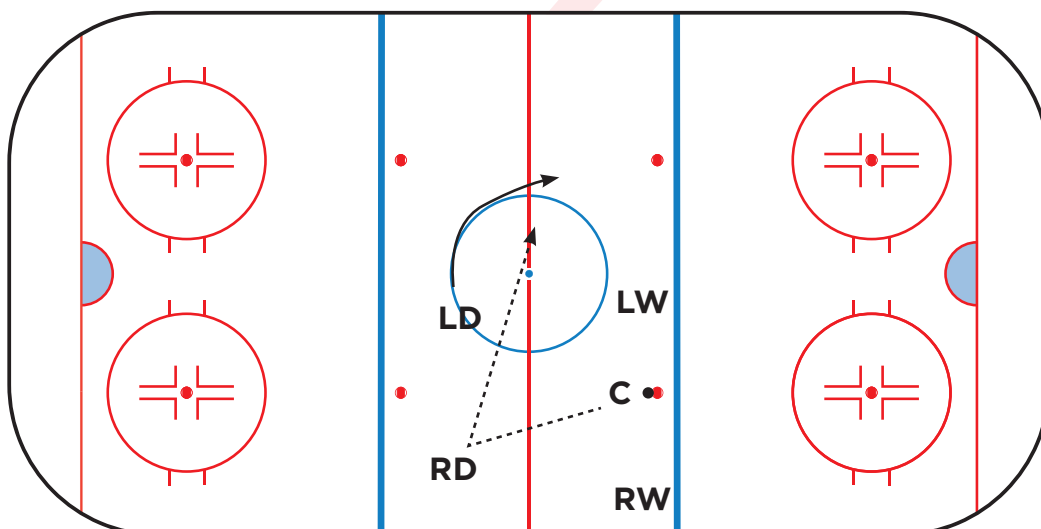

- Centre wins draw back
- RD retrieves puck and makes an indirect pass to RW
- RW slides low to receive the pass and clears the zone

LD Curl - Neutral Zone

- Centre wins draw back to RD
- LD curls out
- RD looks to pass to LD

Obviously RD needs to be aware of the opposing forward filling the passing lane and intercepting the puck. If the play isn't there the RD can dump the puck to the corner

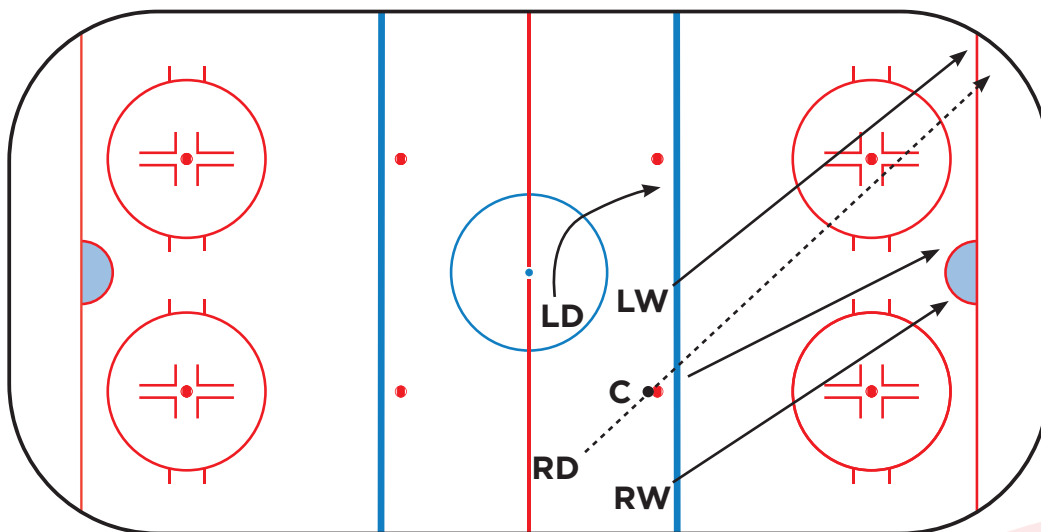

FACE-OFFS

Defense Dump - Neutral Zone

- Centre wins draw back to RD
- LW heads hard to the corner
- C & RW head hard to the net
- RD dumps the puck high and into the LW corner
- LW retrieves the puck and looks for an opening in front

Note: RD must get the puck high to get over the opposing players

FACE-OFFS

Defensive Zone

Option 1

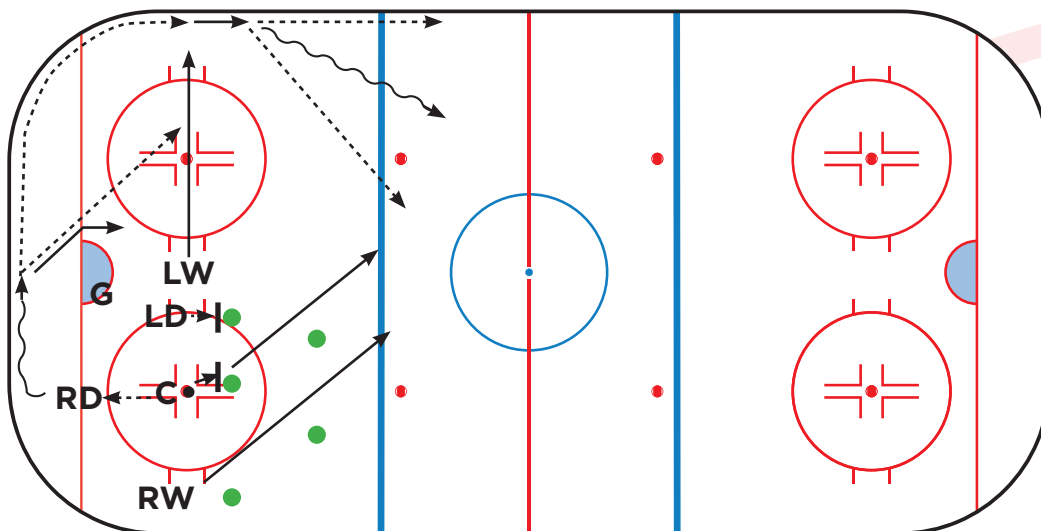

- Centre wins draw back to RD
- RD takes the puck behind the net and curls it around the boards to LW or directly pass to LW
- Centre holds up opposing Centre then breaks up ice
- RW breaks up ice to support break-out
- LD holds up his man to prevent him from getting to LW on the boards
- LW has three choices:
 1. pass to Centre breaking through the middle
 2. skate the puck
 3. chip it out of the zone

Our goal is to get the puck out of our zone then worry about creating an offensive opportunity.

Option 2

- If RD sees open ice he can skate with the puck instead of making a pass

Note: Be careful of the new obstruction rules when blocking the opponent. Basic idea is to get the puck to a player in 'open ice'. Try not to dump the puck back up the strongside boards. We can also work 'Home Run' passes off this alignment.

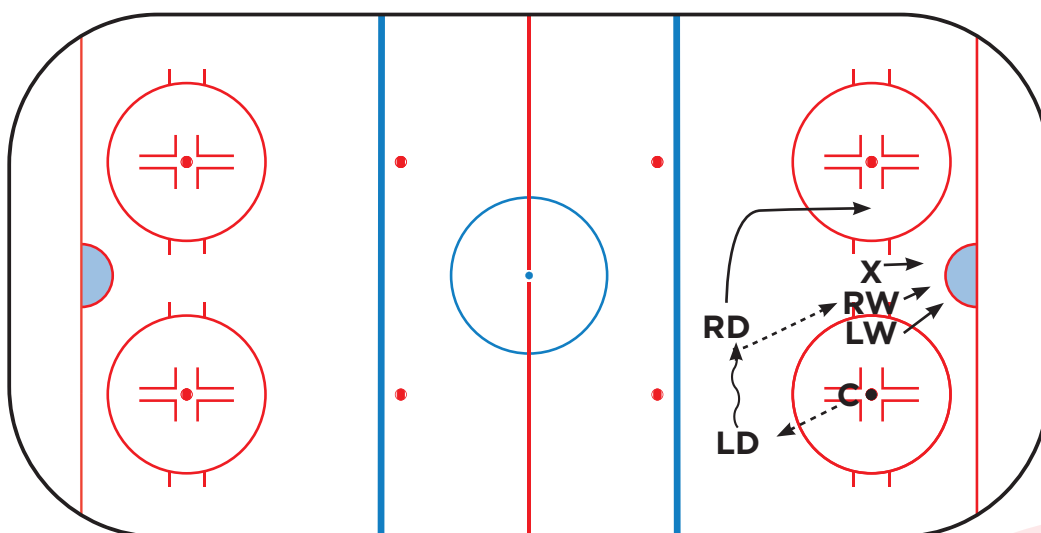

FACE-OFFS

Cornell - 6 on 5

- Centre wins draw back to LD
- Wings crash the net
- RD fans out to opposite circle
- LD shoots into traffic in front of the net
- RD is available for a pass or to pick up loose pucks up high

Note: If the face-off is in the opposite circle then change the LD & RD

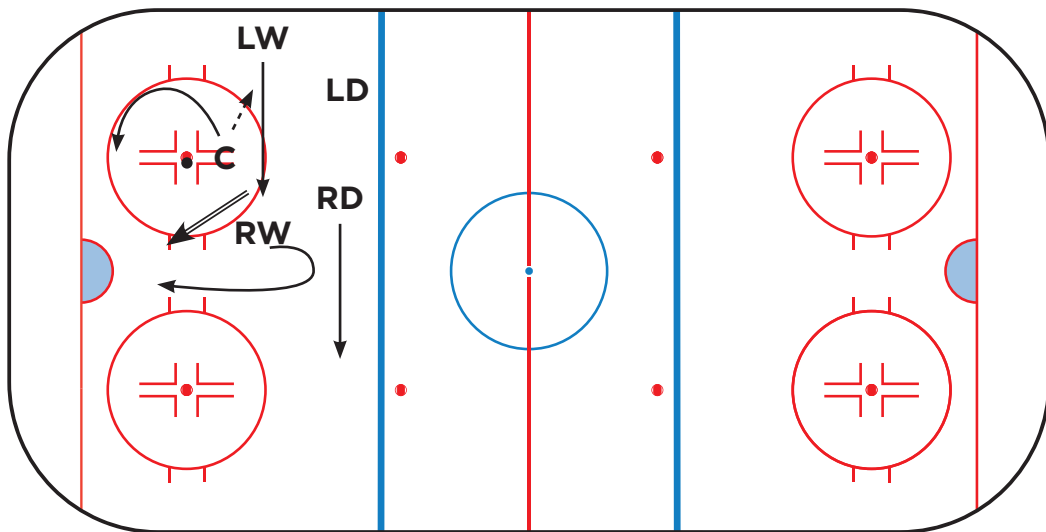

FACE-OFFS

3 Option Win - Offensive Zone

Option 1

- Centre wins draw back to LD
- LW (board wing) skates toward slot and takes shot
- Centre loops and looks for rebound
- RW (slot wing) loops and looks for rebound
- Wings should line up about 2 feet above hash mark
- Wings should be on their off wing
- All players are on their off wing
- Pass from LW to RD is always an option

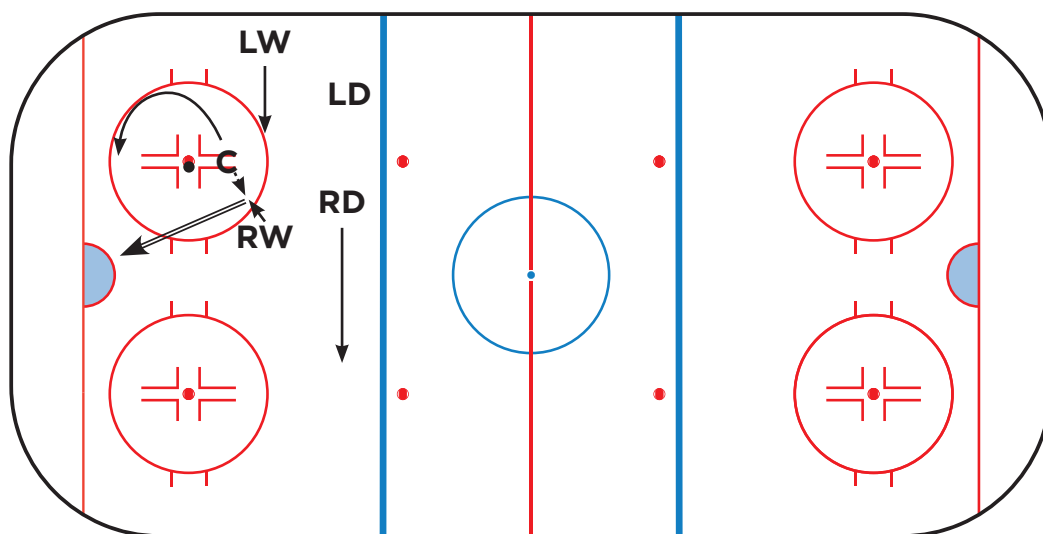

FACE-OFFS

3 Option Win - Offensive Zone

Option 2

- Centre wins draw to RW
- RW (slot wing) steps in and takes a quick shot
- Centre loops and looks for rebound

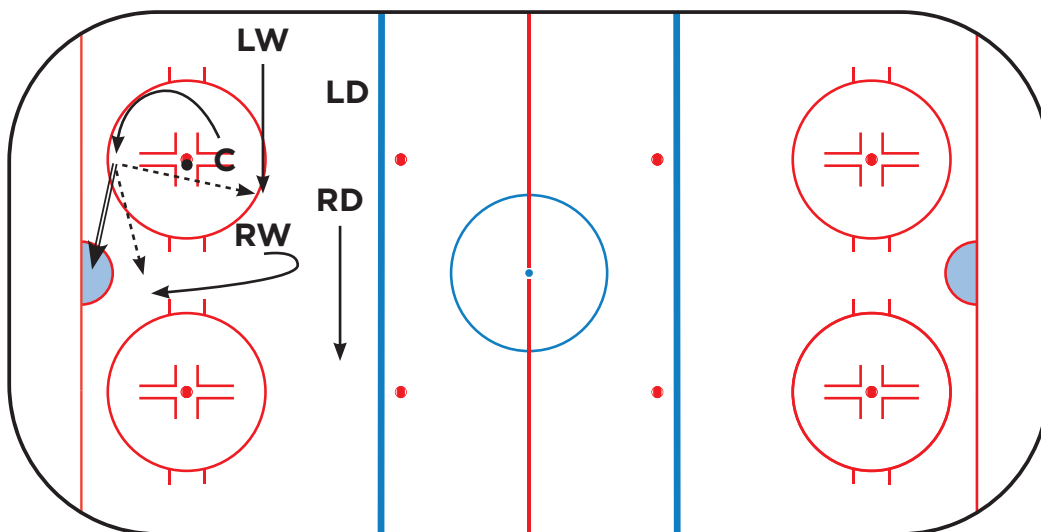

FACE-OFFS

3 Option Win - Offensive Zone

Option 3

- Centre wins draw to LW
- LW (board wing) skates toward slot and passes to centre
- Centre loops and looks for pass
- RW (slot wing) loops and looks for rebound
- Wings should line up about 2 feet above hash mark
- Wings should be on their off wing
- Centre can shoot or pass

GENERAL INFORMATION

Basic Individual Skills

Skating, Puck Control, Passing, Shooting, Checking

These skills will be addressed at practice by using, error detection and correction, new drills, repetitive drills and a willingness to learn/change on the player's part.

Individual Tactics

These skills are learned at practice working together. Using error detection and correction, drills that allow the coach to teach Offensive Zone entries, Offensive Zone plays and teaching defensemen how to play against them.

Offensive Team Play

These skills are learned at practice working together, in the dressing room listening to the coaches, at the white board. Using error detection and correction, using drills that allow the coach to teach; Defensive zone exits, Neutral Zone regroup and transition, Offensive Zone entries, Offensive Zone plays, and teaching defensemen how to join the rush.

Defensive Team Play

Defensive Team Play is a work issue not a talent issue. Defensive Team Play is more about the right attitude than it is about talent. These skills are learned at practice, at home, at school. By working together at practice, in the dressing room listening to the coaches, at the white board the players will learn the skills needed to play good defense. The coaches will use error detection and correction, drills that allow the coach to teach the skills and method they want for there team.

Face-Offs

These skills are learned at practice working together, in the dressing room listening to the coaches, at the white board. The coaches will use error detection and correction and drills that allow the coach to teach.

GENERAL INFORMATION

Special Teams

These skills are learned at practice working together, in the dressing room listening to the coaches, at the white board, maybe from a team playbook. There is no substitute for hard work, effort and a great attitude. The coaches will use error detection and correction and drills that allow the coach to teach the skills and system they want to use.

Goaltending

Goalie coaching is not available at every session so most coaches involve the goalies in most drills by shots on net, error detection and correction, off-ice training, mental prep, and by allowing them to be who they are.

Off-Ice Training

The team should have a good warm-up and cool down in place for use at practice and games.
